Covenant of Mayors' Investment Forum – Energy Efficiency Finance Market Placeting | Brussels| 18./19.02.2020

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement no. 785058

PHYSICAL RISK + TRANSITION RISK

“STRANDED ASSETS are properties that will be exposed to the risk of early economic obsolescence due to climate change because they will not meet future regulatory efficiency standards or market expectations.” (CRREM, 2019)

Source: TCFD Technical Supplement, 2017

Climate science: Climate impact and carbon emission budgets/pathways compatible with limiting global warming to $x.x^{\circ}\text{C}$

Politics: Commitment to limit global warming to 2°C or better 1.5°C

New mandatory and voluntary requirements to (sustainable) finance & carbon risk

CARBON RISK REAL ESTATE MONITOR

CRREM pathways

- Paris-aligned decarbonisation & energy reduction pathways
- Per country and building type

CRREM Tool

- Assess the carbon and energy performance of buildings and portfolios
- Benchmark against CRREM pathways and peers
- Derive indicators for risk management, reporting, disclosure

CARBON RISK ASSESSMENT & MANAGEMENT BASED ON QUANTITATIVE PERFORMANCE DATA AND TARGET SETTING

DECARBONISATION PATHWAYS

Aligned with 1.5°C and 2°C global warming, country- and building type specific

+

BUILDING'S CARBON PERFORMANCE

Energy consumption, carbon emission factors, grid decarbonisation), changed heating and cooling demand, normalisation

=

CARBON RISK ANALYSIS

Year of stranding, excess emissions, carbon costs, energy costs, benchmarking

CRREM DOWNSCALING: FROM GLOBAL EMISSIONS TO CARBON INTENSITY PATHWAYS

Global GHG budget and emissions pathway (consistent with a certain amount of global warming)

Global buildings GHG emission pathway

Global buildings GHG intensity pathway

EU buildings GHG intensity pathway

EU commercial real estate (CRE) GHG intensity pathway

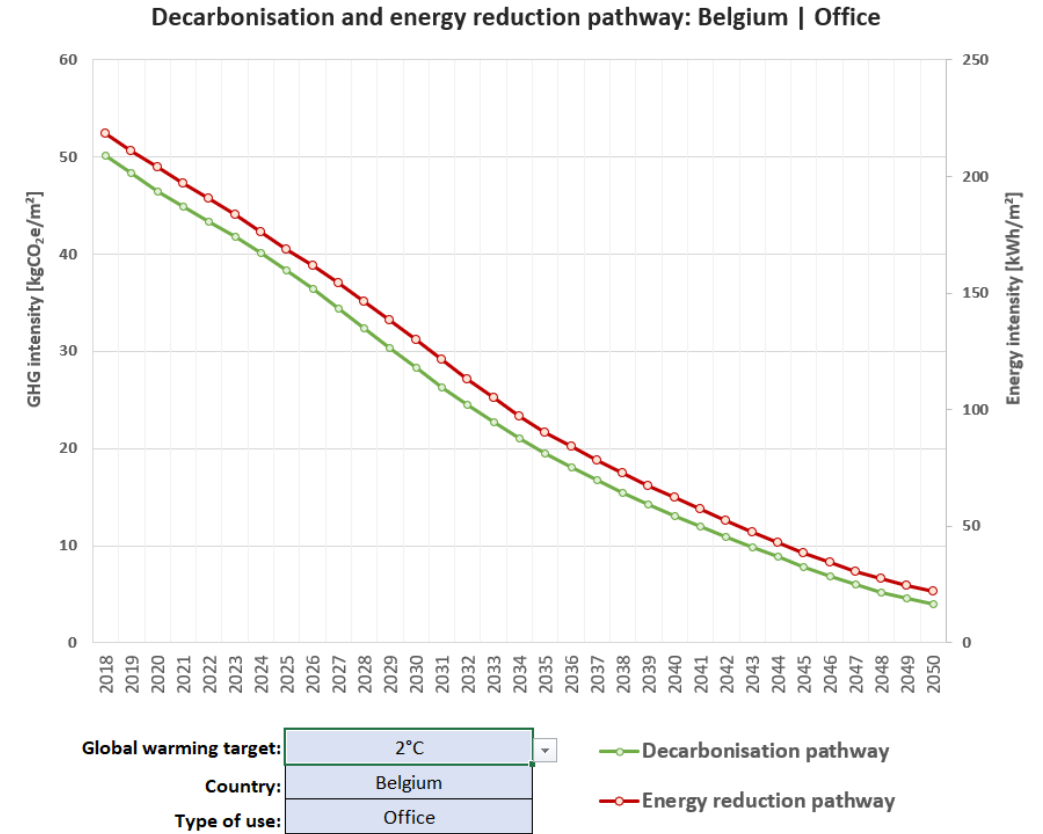

Country-specific CRE GHG intensity pathways

Country-specific CRE-subsector GHG intensity pathways

Country-specific CRE-subsector energy intensity pathways

CARBON RISK ASSESSMENT & MANAGEMENT BASED ON QUANTITATIVE PERFORMANCE DATA AND TARGET SETTING

CRREM TOOL STRANDING DIAGRAM

STRANDING DIAGRAM (Asset #12 - Steinbach Tower)

Based on global warming target: 2°C

Display excess emissions: Yes

Year of stranding: 2032
Carbon value at Risk: 3.0%

Type of use: Office

Country: Austria
Change of GHG intensity vs. 2018: -4.9%

DECARBONISATION PATHWAYS

Aligned with 1.5°C and 2°C global warming, country- and building type specific

+

BUILDING'S CARBON PERFORMANCE

Energy consumption, carbon emission factors, grid decarbonisation), changed heating and cooling demand, normalisation

=

CARBON RISK ANALYSIS

Year of stranding, excess emissions, carbon costs, energy costs, benchmarking

QUANTITATIVE CARBON PERFORMANCE AND RISK INDICATORS

Year of Stranding, Carbon Value at Risk, Year-to-Year Improvement, Costs of Carbon...

ENERGY CONSUMPTION

Based on (optionally) normalised baseline consumption and projected data considering changed heating and cooling demand

COSTS OF ENERGY AND CARBON

Based on energy and carbon price projections (IEA, EU etc.)

ENERGY REDUCTION PATHWAYS

Energy targets based on country-specific sector-wide emission factor reflecting energy mix and evolving grid decarbonisation

QUANTITATIVE CARBON PERFORMANCE AND RISK INDICATORS

EXCESS EMISSIONS PER FLOOR AREA

Cumulative excess emissions until 2050 [kgCO ₂ e]:	1.5°C-target	2°C-target	User-defined
	2,149,875	1,463,488	1,088,809

COSTS OF EXCESS EMISSIONS ABOVE TARGET

Analogous to the NY City model with penalties for each ton of emission above emission limit (and possibility of trading emission credits)

QUANTITATIVE CARBON PERFORMANCE AND RISK INDICATORS

COSTS OF RETROFITTING TO COMPLY WITH CARBON TARGETS

RETROFIT MODEL: STRANDING DIAGRAM WITH & WITHOUT RETROFIT

Simulation of investment in energetic retrofit and its effect on carbon risk indicators (based on marginal abatement costs)

CARBON RISK IN REAL ESTATE PORTFOLIOS

EVOLUTION OF STRANDING WITHIN PORTFOLIO

Diagrams on the right display the evolution of stranding within your portfolio. Upper graph: Relative share of stranded assets. Lower graph: Absolute figures. Choose whether to display data based on the number of buildings, gross floor area (GFA) or gross asset value (GAV). Choose whether to exclude individual assets or exclude them from a certain year on.

Asset ID	Include	Sell in year
1	Yes	Don't sell
2	Yes	Don't sell
3	Yes	Don't sell
4	Yes	Don't sell
5	Yes	Don't sell
6	Yes	Don't sell
7	Yes	2035
8	Yes	Don't sell
9	Yes	Don't sell
10	Yes	2037
11	Yes	Don't sell

Assessment year:

CARBON RISK IN REAL ESTATE PORTFOLIOS

STRANDING EVENTS: NEED FOR ACTION?

The graph on the right provides a summary of stranding events in the course of time. Each circle corresponds to one asset not complying with its decarbonisation pathways for the first time. Circle size (floor area) and y-axis (gross asset value) indicate the importance of an asset within the portfolio.

The area of the circles corresponds to the Gross floor area of the stranded asset. Choose below which global warming target to apply. The numbers next to the circles depict the asset ID.

Climate target:

GHG INTENSITY OF PORTFOLIO vs. 1.5°C- & 2°C-TARGETS

The graph on the right presents the GHG intensity of the selected portfolio (black line), benchmarking it against the floor-area-weighted decarbonisation pathway (orange: 2°C, blue: 1.5°C). Exclude individual assets by means of the table below.

Asset ID	Include
1	Yes
2	Yes
4	Yes

Stepwise integration of CRREM Risk Analysis and GRESB

- (1) Download CRREM Risk Assessment Tool pre-filled with data company's GRESB participation
- (2) GRESB participants to receive results of CRREM Risk Analysis within GRESB Portal

Property types and input parameters are aligned with GRESB ESG Benchmark:

General information										Building characteristics							Energy consumption																Fugitive emissions				Renewable energy				
Area ID	Factor	Asset Name	Reporting year	Gross Area (GA)	Reporting period	Entity	Location	Property type	Air conditioning	Area size	Count	City	IP	Code	Address	Tenancy	Grid Electricity	Material use	Fuel oil	District heating (LHV factor)	District cooling (LHV factor)	Other energy consumption Type 1	Other energy consumption Type 2	Gas 1	Gas 2	GHG Level 1	GHG Level 2	Renewable	Other

ENERGY REDUCTION PATHWAYS: BASED ON NET-ENERGY DEMAND

Net-energy demand

=

Procured energy – Exported energy

Consumed energy – (On-site) Generated energy
