Renewable Energy Directive: all types of *renewable energy*

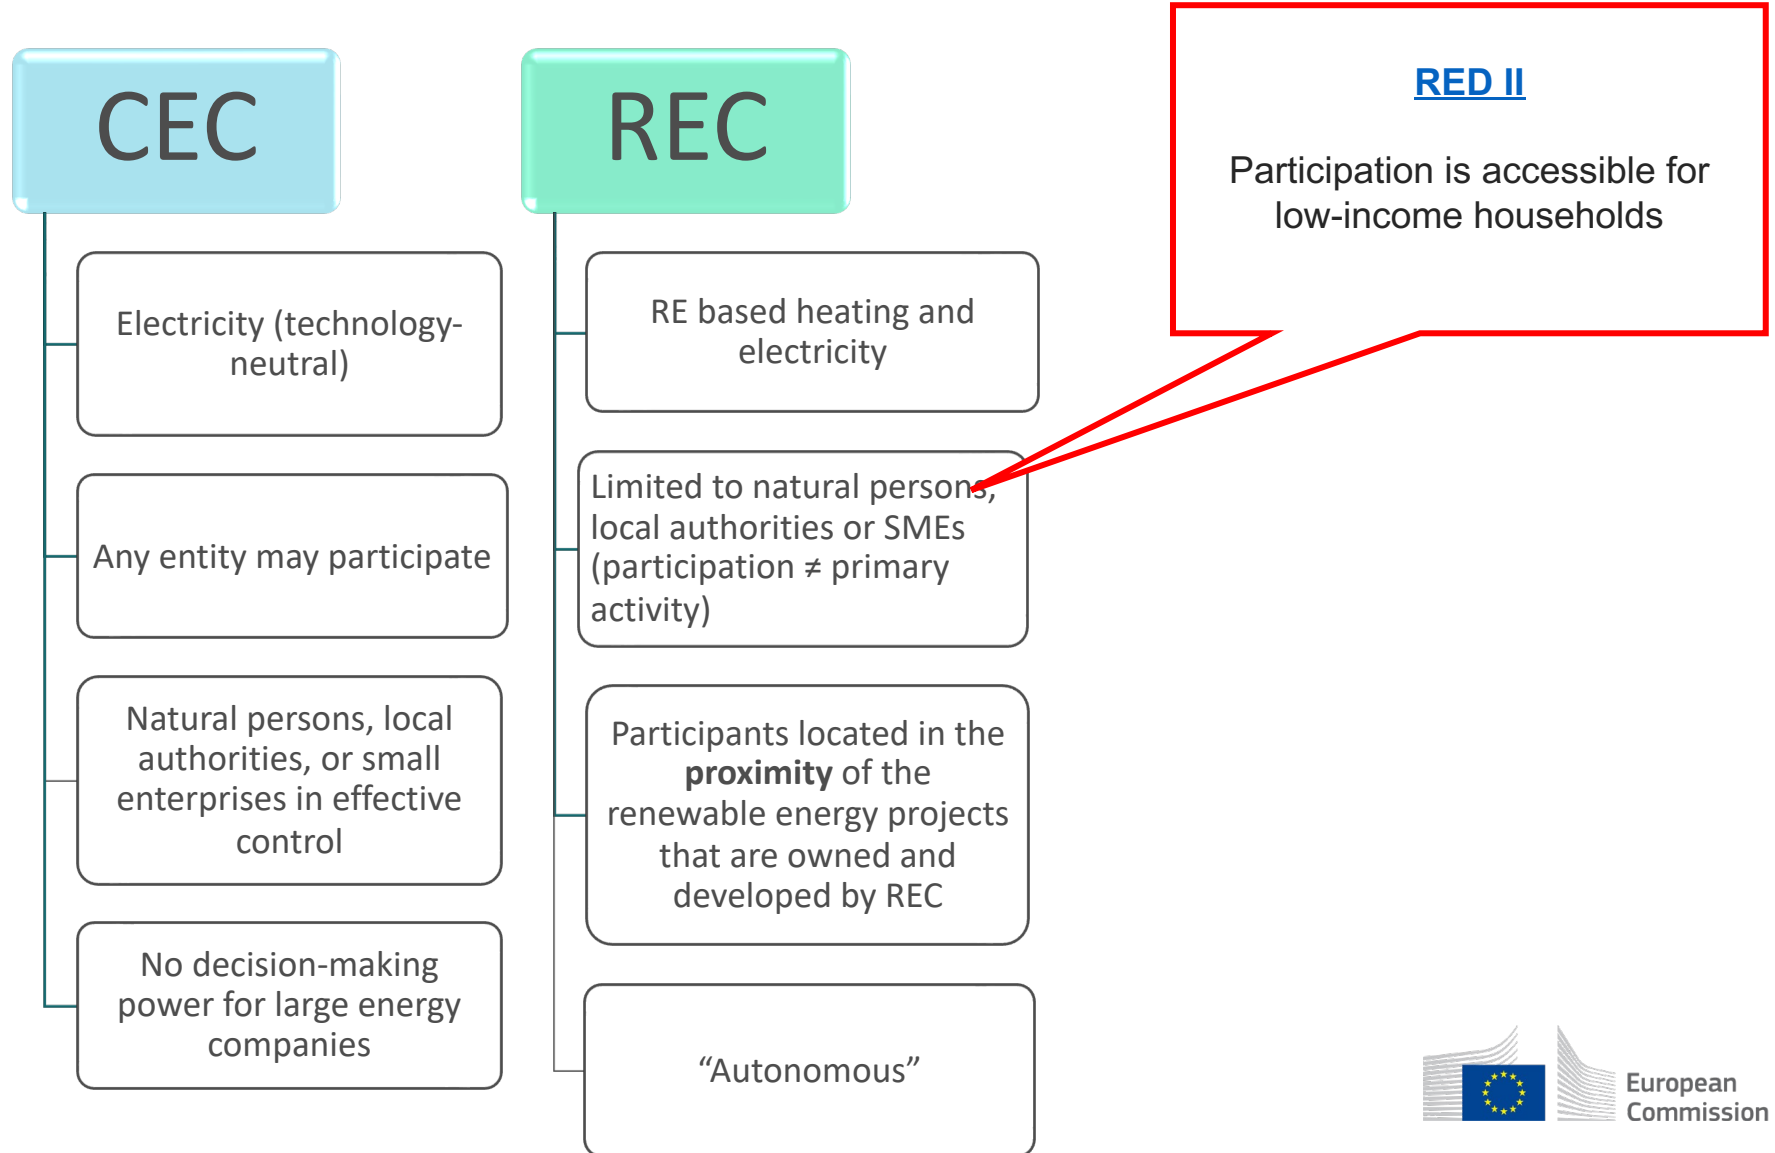

Electricity Directive: all types of *electricity*

# Purpose of energy communities

- Can be an effective tool to increase **public acceptance** of new projects
- Mobilise **private capital** for the energy transition
- Could be a tool to increase **flexibility** in the market

# Differences

# Enabling framework REC & CEC

**Privileges:**  
Access to financial instruments and information  
**Customised support scheme**  
Removal unjustified barriers  
Regulatory and capacity-building support to public authorities

State aid guidelines  
Possible exemption bidding procedures and/or eased participation requirements

**Rights and responsibilities:**  
facilitating market integration (procedures, tariffs and activities)

# 3. REPowerEU

# Role of citizens and communities under REPowerEU

- Communities and citizens can help to deliver on two out of three objectives of REPowerEU:
  - ✓ **Produce clean energy** by increasing acceptance and mobilising private capital investments
  - ✓ **Save energy** by providing energy efficiency services to their members and increasing consumer consciousness of energy use
- Self-consumption schemes may help to **secure access to affordable energy**, including for low-income households

# Key REPowerEU policy instruments

**EU Save Energy Communication** with recommendations for how citizens and businesses can help save around 13bcm of gas imports in the short term

**EU Solar Strategy** with measures to accelerate the roll out of solar energy to increase capacity to 600 GW by 2030

**Electricity market design Communication** to accelerate energy transition and ensure access to low-cost renewables

**Biomethane Action Plan** to save up to 35 bcm of natural gas by 2030

**Permitting Recommendation** to simplify and ease permit granting, grid connection and production licensing procedures

Shared political objective of at least one energy community in every municipality with a population higher than 10 000 by 2025

# 4. Fit for 55 Package

# Legal developments

## RED

(Renewable Energy Directive)

- Potential role in offshore wind, public procurement, heat production, and the development of district heating and cooling networks
- Tailored information in single points of contact for permitting
- Fast track permitting procedures for small-scale RES installations
- Simplified registration processes and reduced registration fees for guarantees of origin

## EED

(Energy Efficiency Directive)

- **Potential role in tackling energy poverty** and achieving energy saving obligations
- Assessment of role and impact in local heating plans
- Accessible information on energy efficiency improvement measures

## EPBD

(Energy Performance of Buildings Directive)

- Building renovation plans should report on the role of energy communities.
- Renewable energy communities can contribute to zero emission buildings.

## SCFR

(Social Climate Fund Regulation)

Social Climate Plans may include **energy community related measures to target vulnerable households, micro-enterprises, and transport users**

# Other key policy documents

- **Commission guidance on RRP in the context of REPowerEU**: Member States may decide to support and promote energy communities to address energy poverty in Recovery and Resilience Plans
- **Commission guidance on NECPs update**: empower energy consumers via energy communities, with special focus on vulnerable groups
- **Commission Recommendation to tackle energy poverty**: collective self-consumption schemes, including those managed by energy communities or municipalities.

# 5. Electricity Market Design Reform (Commission proposal)

# Energy sharing – Commission proposal

Art  
15a

## *Right to energy sharing*

### ***Commission proposal:***

- A right to energy sharing for all active customers to help them protect themselves against high and volatile wholesale market prices:
  - **Community energy sharing**
  - Peer to peer(s) energy sharing
  - Third party organised energy sharing
- Consumers have the right to have shared electricity deducted from their total metered consumption for the purpose of calculating the energy component of the energy bill.

# New scenario – Local authorities sharing surpluses with households affected by energy poverty

- ❖ Sharing of surplus generated electricity by individual active customers beyond multi-apartment building

[See for example: Zero, proximity energy programme in Valencia.](#)

# 6. EU support for energy communities

# Assistance for energy communities

**Communities  
for Climate**

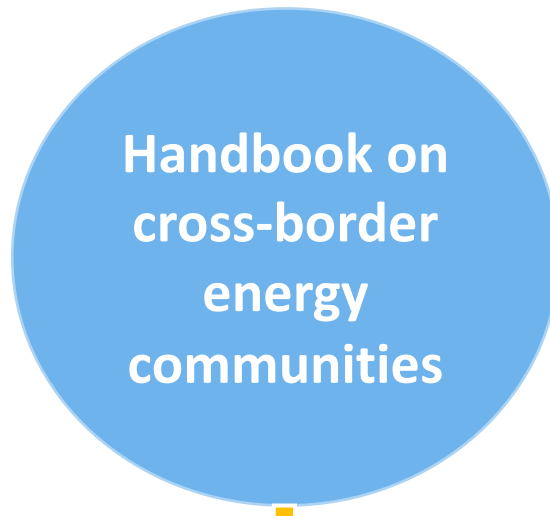

Pilot action - Support to 50 local climate-related community projects, including energy communities

**Energy  
Communities  
Initiatives  
ENER/CINEA**

Pilot action (ongoing) – Support services for Citizen Led Renovation  
  
Energy communities facility – grant support for business plan development

**Handbook on  
cross-border  
energy  
communities**

1. Definition of cross-border energy communities
2. Identification of obstacles
3. Good practices

**Energy  
communities  
in the  
Western  
Balkans**

Pilot action – Support to the development of energy communities in IPA countries
