CONNECTING OBLIGATED
PARTIES TO ADOPT INNOVATIVE
SCHEMES TOWARDS ENERGY
POVERTY ALLEVIATION

Part I

SocialWatt – In a Nutshell

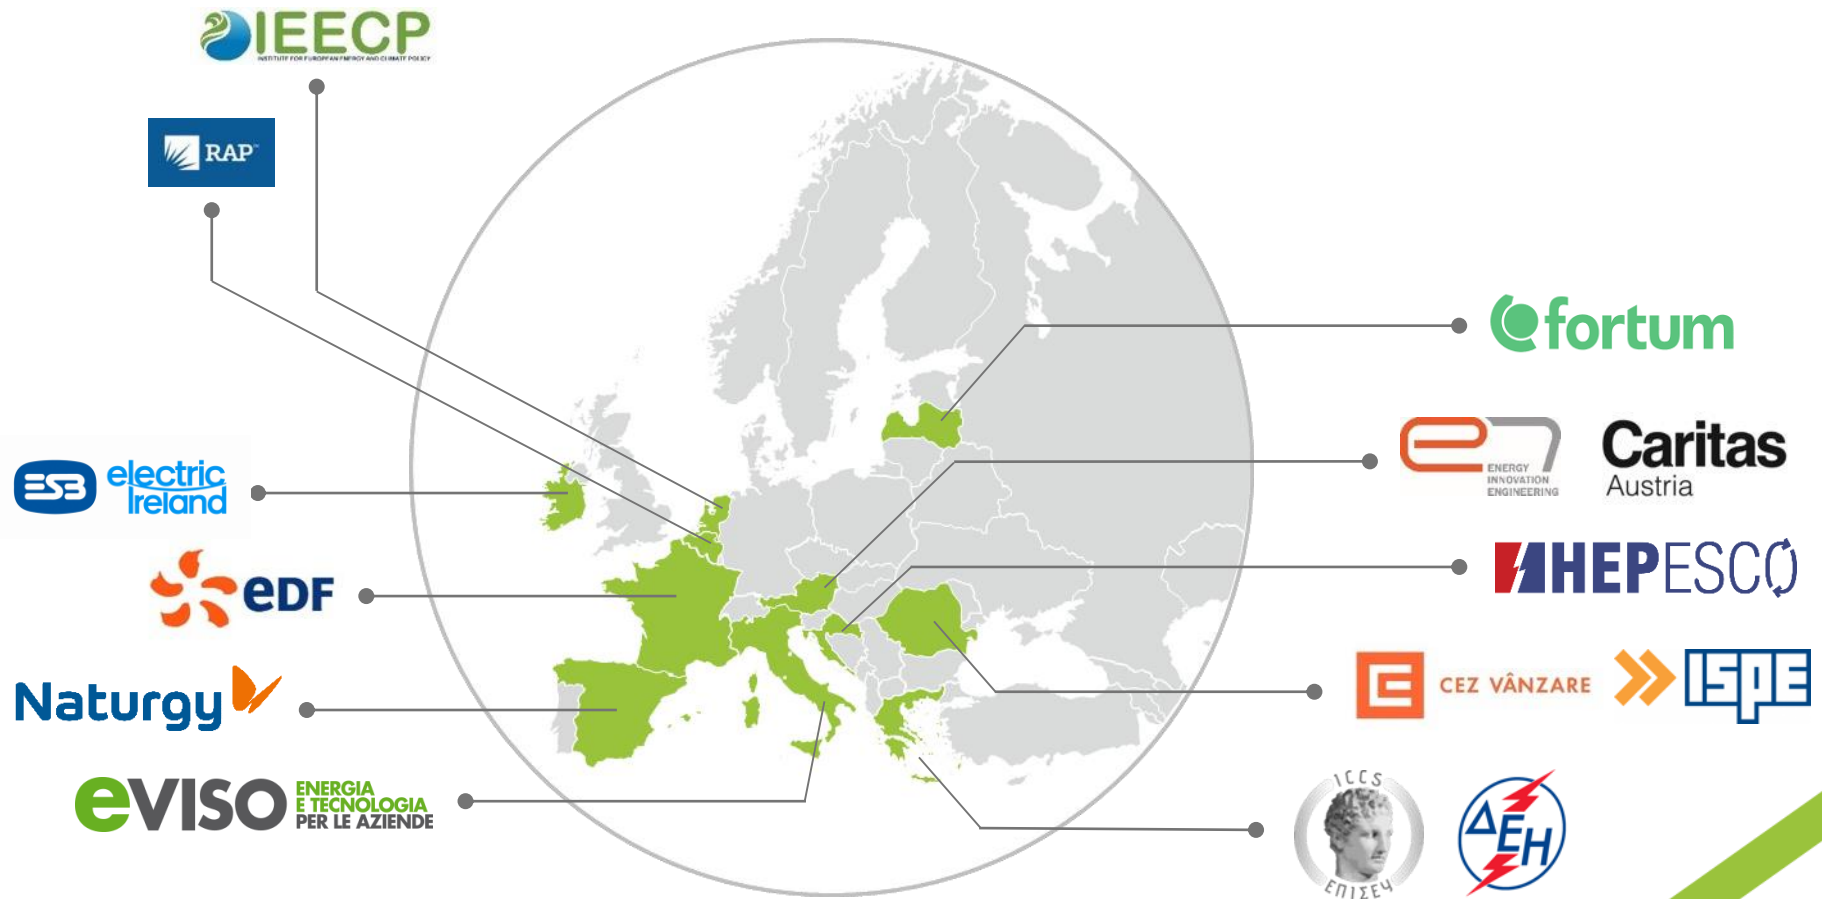

Project Summary (1/2)

| | |
|--------------|---|
| Title | Connecting Obligated Parties to Adopt Innovative Schemes towards Energy Poverty Alleviation (Social Watt) |
| Funding | European Union's Horizon 2020 Research and Innovation Programme |
| Started | September 2019 |
| Duration | 36 Months |
| Coordinator | Institute of Communication and Computer Systems (ICCS) |
| Participants | 14 |
| Budget | 1,998,297.50 € |
| Contract No | 845905 — SocialWatt — H2020-LC-SC3-EE-2018 |

Project Summary (2/2)

Who we are?

European Commission

Covenant of Mayors
for Climate & Energy

Covenant of Mayors Investment Forum - Energy Efficiency
Finance Market Place

Scope (1/2)

SocialWatt will develop and provide **utilities** and **energy suppliers** with appropriate tools for effectively engaging with their customers and working together towards **alleviating energy poverty**.

SocialWatt will enable obligated parties under **Article 7** of the Energy Efficiency Directive across Europe to develop, adopt, test and spread **innovative energy poverty schemes**.

Scope (2/2)

SocialWatt will:

- ▶ Support utilities and energy suppliers contribute to the fight against energy poverty.
- ▶ **Implement** and **replicate** innovative schemes to alleviate energy poverty.
- ▶ Bridge the gap between energy companies and social services by promoting collaboration and implementing **knowledge transfer** and **capacity building activities** that focus on energy efficiency and renewable energy actions to alleviate energy poverty.

Objectives

Identify energy poor citizens

01

- Specific Indicators and data per country
- 'SocialWatt Analyser' tool

Develop innovative scheme to alleviate energy poverty with an emphasis on RES/EE investments

02

- Energy poverty schemes & actions identified
- 'SocialWatt Plan' tool
- Energy Poverty Action Plans

Build the capacity of utilities, energy suppliers and social services

03

- Stakeholder Community
- Exchange knowledge & experience
- Means & methods for effectively financing and implementing energy poverty schemes

Implement the schemes selected and evaluate their effectiveness

04

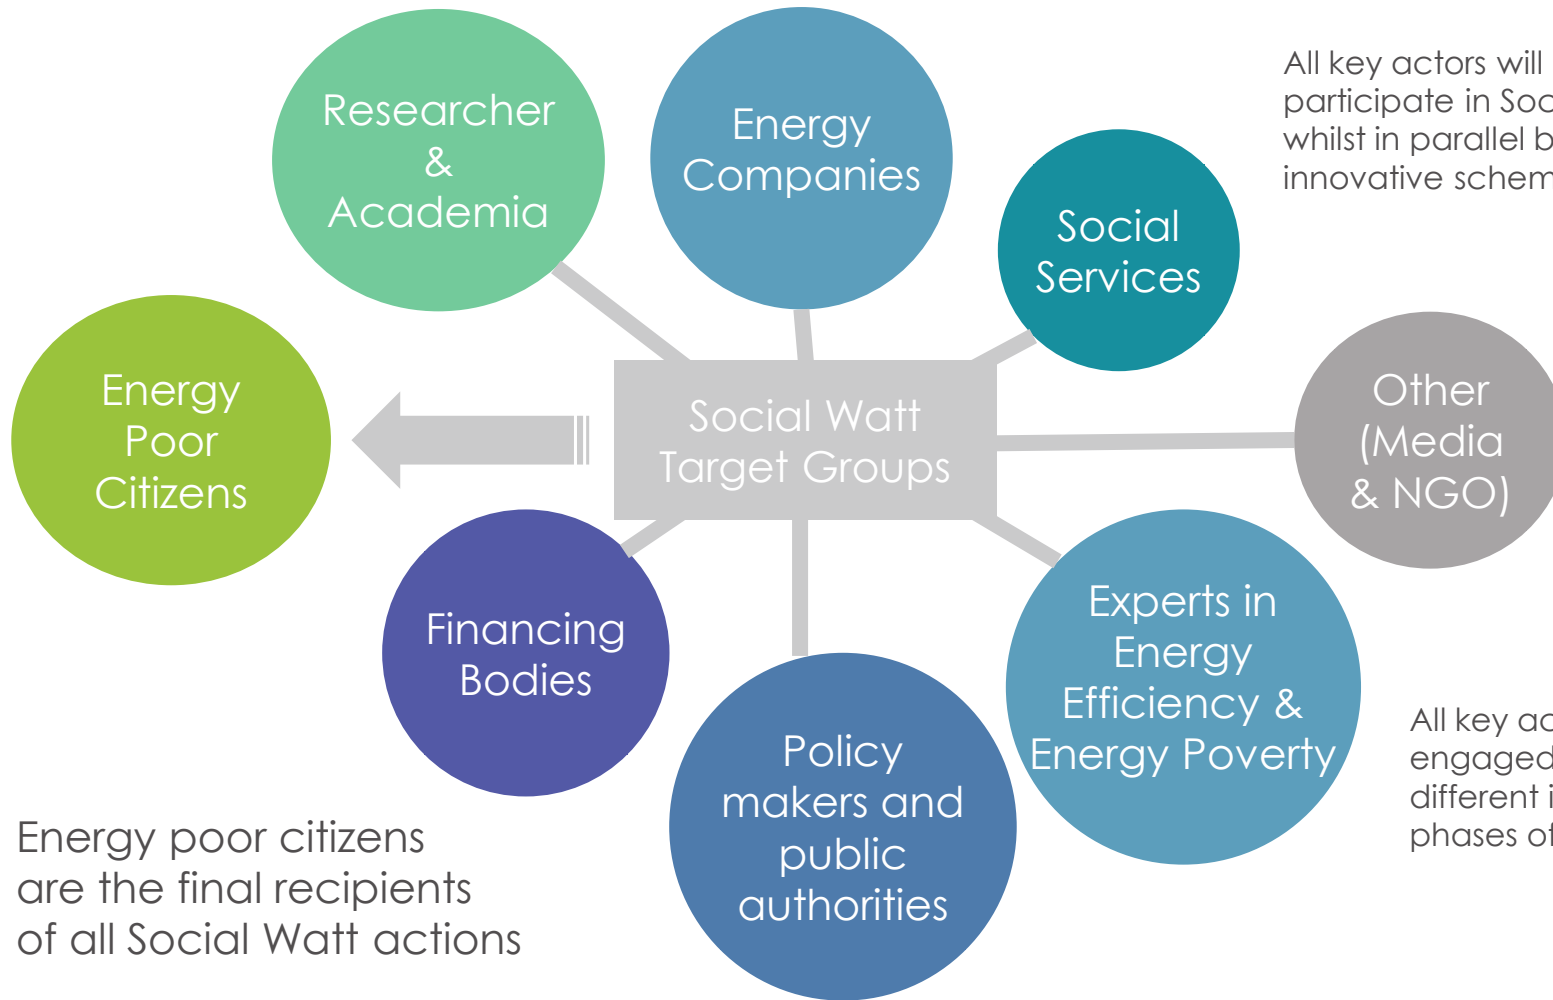

- Implementation of at least 2 schemes per participating utility, one of which needs to be innovative
- Monitoring energy poor citizens' participation
- 'SocialWatt Check' tool

Replicate the project's outcomes and provide policy recommendations

05

- Open call for utilities to express interest & exploit SocialWatt
- 12 energy companies across Europe selected to replicate the project results
- Policy recommendations to alleviate energy poverty

Target Groups

All key actors will actively participate in SocialWatt activities whilst in parallel benefit from the innovative schemes

All key actors will be engaged during the different implementation phases of the project

Energy poor citizens are the final recipients of all Social Watt actions

Part II

Energy Poverty & Article 7

Background

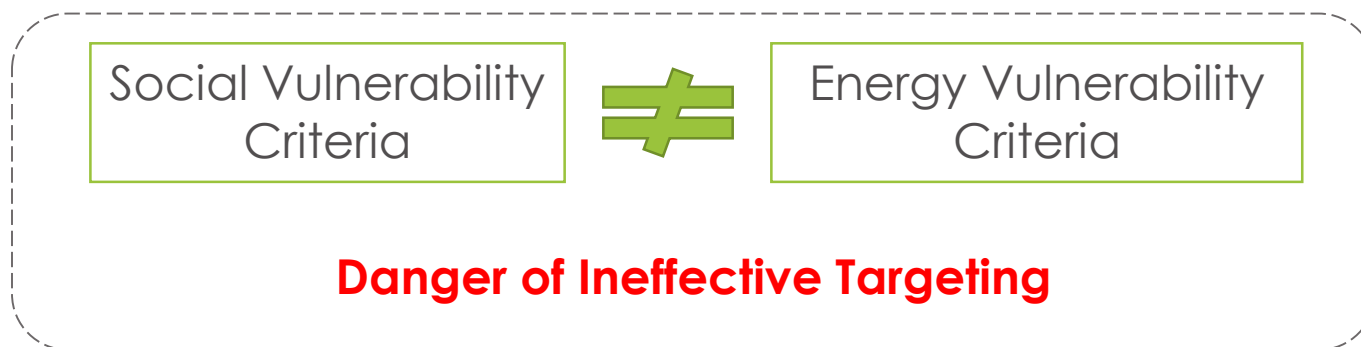

- ▶ 57M people cannot keep their home adequately warm during winter
- ▶ 104M people cannot keep their homes comfortable enough during summer
- ▶ 87M people live in poor quality dwellings
- ▶ 52M people face delays in paying their energy bills

Source: Eurostat

Energy Poverty Definitions

- ▶ The large majority of European countries have a definition for **energy vulnerability**, which frequently relies on receipt of social benefits or on socioeconomic groups (as a proxy for income-based vulnerability), age, disability or long-term illness as eligibility criteria.

- ▶ Only 8 Member States have official or formally recognized definitions of **energy poverty**: Belgium, Cyprus, France, Ireland, Romania (in 2021), Slovakia, Spain and UK (5 out of the 11 SocialWatt partner countries).

Energy Poverty Indicators

Different indicators are officially used per country

| | |
|--|--|
|  | 10% indicator |
|  | Low income, high costs |
|  | Arrears on utility bills |
|  | Share of energy expenditure in income twice the national |
|  | Self-reported EP |
|  | Hidden EP |
|  | Other |
|  | No definition |

Energy poverty & EEO Schemes

| Country | |
|-----------------|--|
| Austria | Energy efficiency savings to be counted as 50% higher, if savings are from low income households |
| Belgium | Alternative policy measures |
| Croatia | Energy savings in energy-poor households , as part of the energy efficiency obligation scheme. |
| France | Energy efficiency obligation related to fuel poverty added |
| Greece | Alternative policy measures and an energy efficiency obligation scheme (with measures in vulnerable households accounted for with an increase factor of 1.4) |
| Ireland | Alternative policy measures and energy efficiency obligation schemes. |
| Italy | Energy efficiency obligation scheme |
| Latvia | Energy efficiency obligation scheme |
| The Netherlands | Alternative policy measures |
| Romania | Alternative policy measures |
| Spain | Obligated parties contribute to the National Energy Efficiency Fund the amount designated by the ministry. |

Status Quo on Energy Poverty

Report on the Status Quo of Energy Poverty and its Mitigation in the EU (www.socialwatt.eu)

- ▶ Energy Poverty definitions and indicators
- ▶ Causes, impacts, prevalence and levels of energy poverty in the 11 SocialWatt countries
- ▶ Good practice policies, actions and programmes to alleviate energy poverty:
 - ▶ Bill support and disconnection prevention
 - ▶ Energy saving and energy bill advice
 - ▶ Low cost energy efficiency measures
 - ▶ Energy efficiency & renewable energy measures & investments

Challenges Identified

Early stage challenges to design and implement innovative schemes:

- ▶ How to finance support for energy poor households
- ▶ What measures are both fundable and provide a significant energy poverty alleviation impact
- ▶ How to define and target priority groups of energy poor households
- ▶ How to achieve take up and reach
- ▶ Bureaucracy

Example of an Innovative Scheme (1/2)

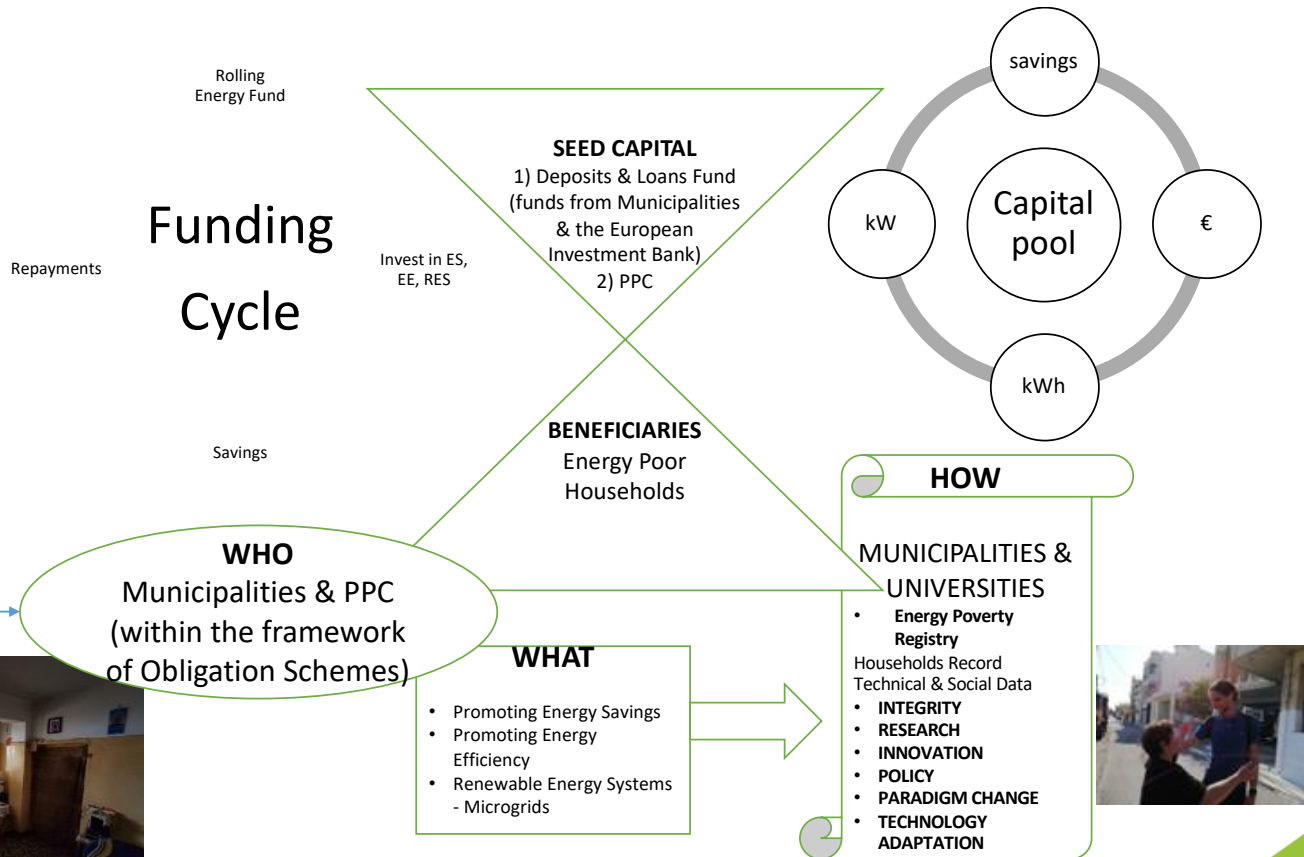

An example of an innovative scheme being considered by the Public Power Corporation S.A. (PPC):

- ▶ Involved parties: PPC, Regional Government and Energy Technologies Industry (i.e. construction industry, technology retailers or associations)
- ▶ Target group: **energy poor households**
- ▶ Provision of **energy technologies on a competitive price by the retailers (i.e. a discount)**, along **with a grant provided by PPC**.
- ▶ A bank with the guarantee of the Region would provide **soft loans** to customers in order to pay the remaining amount for the technologies/project
- ▶ Energy poor households will **pay back** the loan **through** their **energy bills**

Example of an Innovative Scheme (2/2)

PPC considers the development of a rolling fund for supporting energy efficiency projects for energy poor Households

Energy poverty "A situation where a household or an individual is **unable to afford basic energy services to guarantee a decent standard of living** due to a combination of *low income*, high energy expenditure and low energy efficiency of their homes"

*Work in Progress by PPC & West Attica University

Month 14
(November 2020)

SocialWatt Analyser (1/7)

SocialWatt Analyser (2/7)

SocialWatt Analyser (3/7)

SocialWatt Energy Poverty Index:

- ▶ If the **actual energy consumption** (e.g. electricity, natural gas, etc.) of a household is lower than the theoretically required for maintaining thermal comfort (heating/cooling), the household is classified as energy poor. Otherwise, the ratio between **energy cost** and **income** (in a monthly or annual basis) is taken into consideration (10%, LHC, etc.).
- ▶ The novelty of the proposed index is **the integration of two dimensions for analysing energy poverty** (A. Income; B. Thermal comfort (energy needs)), compared to the income-based existing energy poverty definitions.

| 5 | 2016 | 5970 | 1449 | EV | CARAMAGNA PIEMONTE |
| 5 | 2017 | 6408 | 1283 | EV | CARAMAGNA PIEMONTE |
| 5 | 2018 | 6011 | 1285 | EV | CARAMAGNA PIEMONTE |
| 5 | 2019 | 6468 | 1401 | EV | CARAMAGNA PIEMONTE |

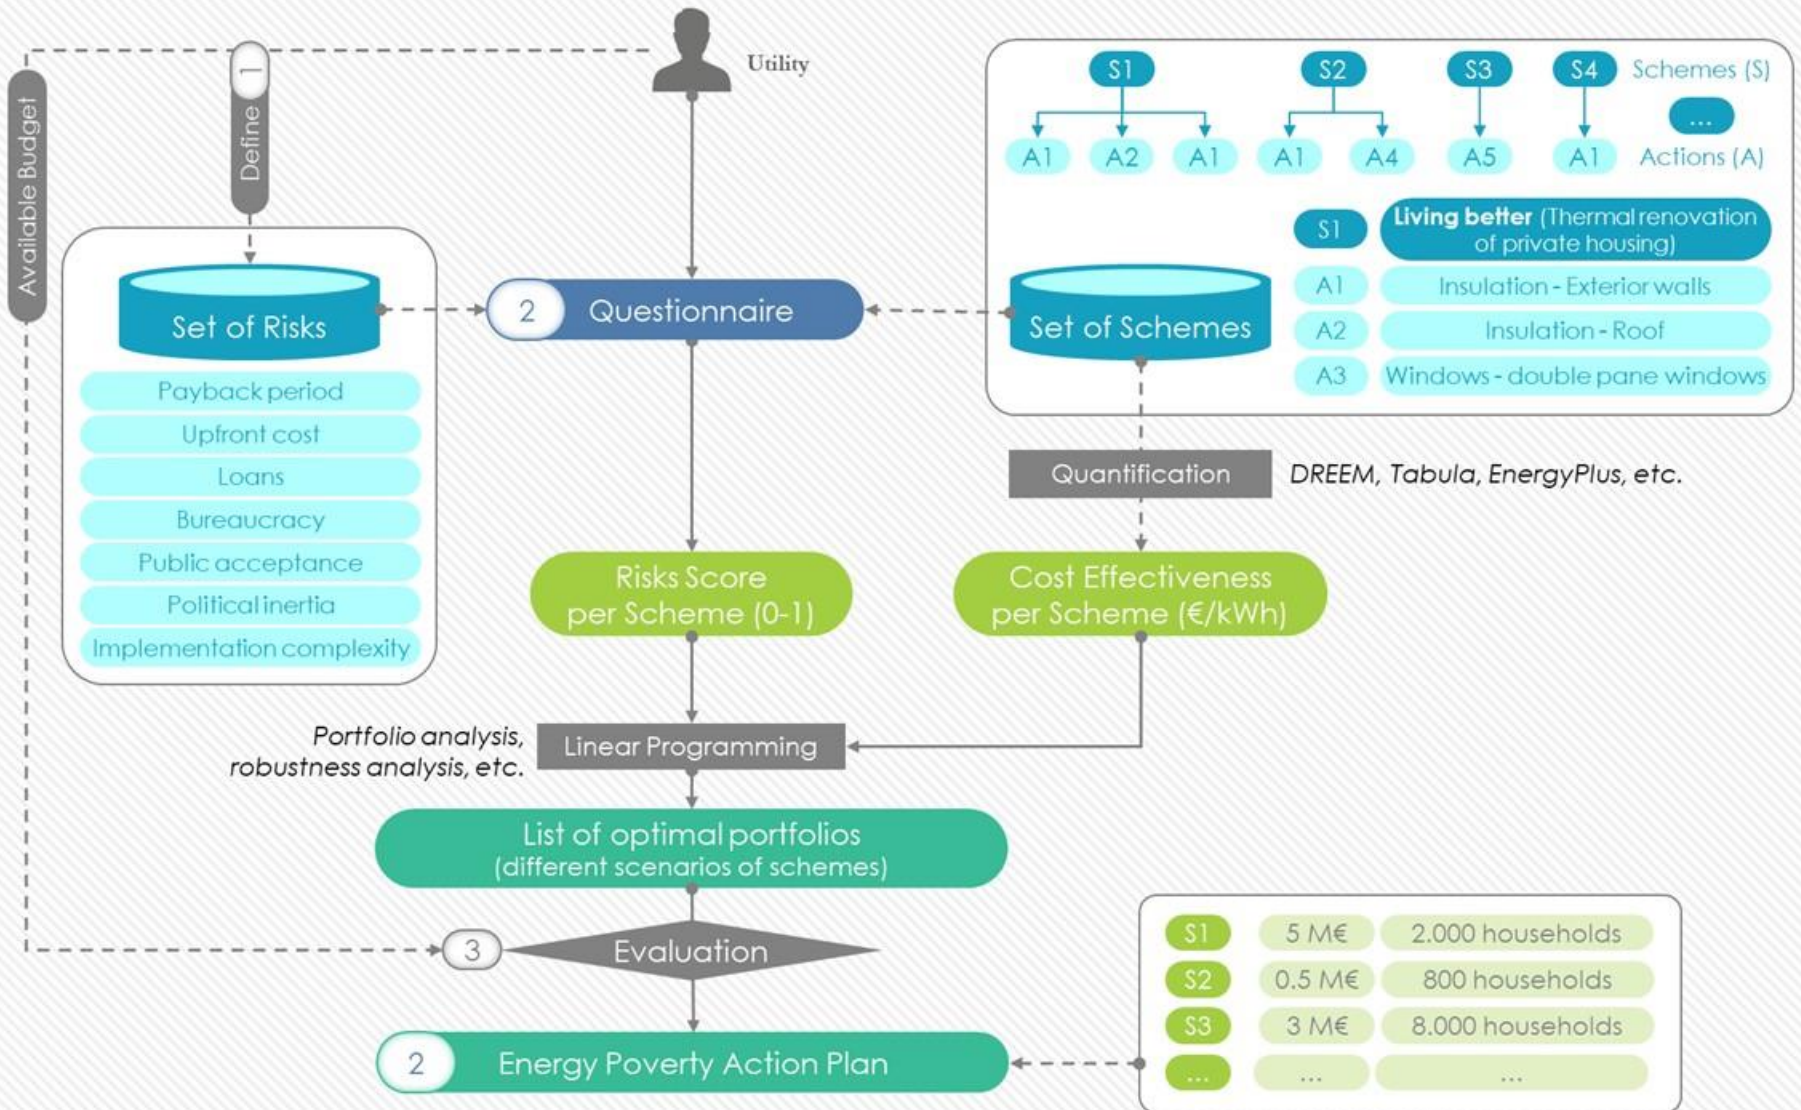

Report with personalised information about each customer:

- Anonymised Household 1 was energy poor until 2018 but not on 2019.
- Anonymised Household 4 fluctuates between energy poverty and being at risk of energy poverty.

SocialWatt Plan (1/3)

- ▶ Different **energy poverty schemes** are being evaluated and incorporated in the SocialWatt Plan tool.
- ▶ The schemes comprise both low (behavioural) and high cost **actions**.
- ▶ The tool will provide utilities with **a set of optimal portfolios**, comprising different combinations of energy poverty schemes, along with a **budget allocation** for each scheme and expected number of customers to be involved.
- ▶ The optimisation is based on set **targets** and **constraints**. More specifically, the proposed portfolios will be evaluated against the objectives of minimising both investment cost and associated risks.

SocialWatt Plan (2/3)

SocialWatt Plan (3/3)

SocialWatt Plan will consider at least **25 different schemes**

Schemes & Actions

S1 Greening home

Actions: Insulation-exterior walls; insulation- roof; windows-double pane windows

S2 Renovate your home

Actions: Leaking Roofs; Plumbing insulation; Fixing Air leakages; Efficient lighting (LED); White appliances

S3 Smarter home

Actions: Smart Meters; Thermostats; Sensors

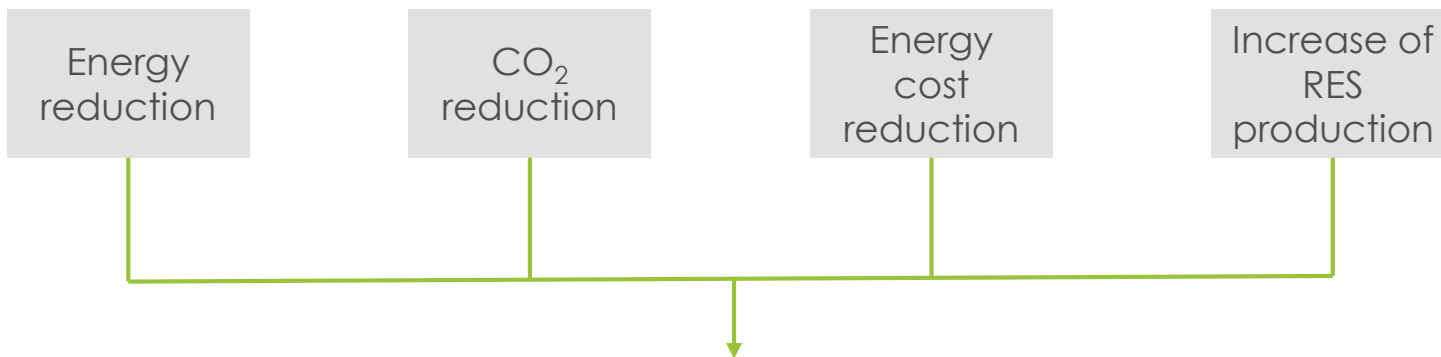

Financing Mechanisms

- F1 Subsidy
- F2 Partial subsidy
- F3 Scalable Subsidy
- F4 Financial Incentive
- F5 Direct Payment
- F6 Eco-Loans
- F7 TAX reduction
- F8 Collaboration with the private sector
- F9 Supporting fund
- F10 ESCO or co-investors

SocialWatt Check (1/2)

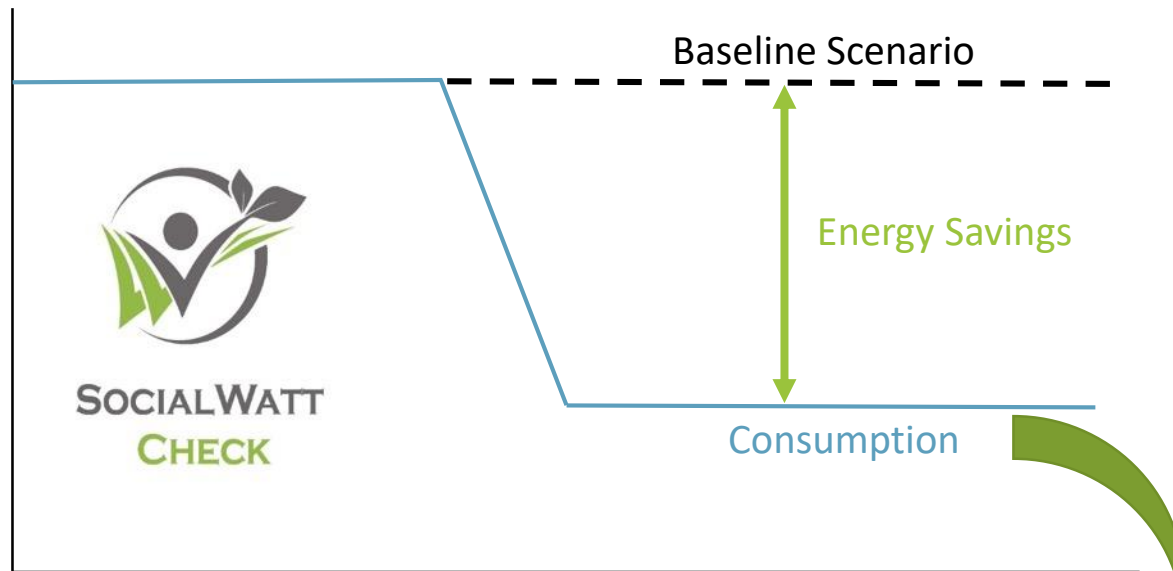

Key monitoring indicators

The tool will enable utilities to track progress, identify in a timely manner risks/threats, exploit opportunities and meet targets

SocialWatt Check (2/2)

Verification Process

An analytical methodology will enable utilities verify energy savings, taking into consideration Article 7 of EED

Does the new consumption level triggered by the implementation of the action plan assist on decreasing the number of energy households?

Lessons Learnt

- ▶ Access to accurate housing and income data is crucial for the personalised analysis of energy poverty. Utilities need to establish **effective communication lines** with customers and other key stakeholders (e.g. social services) to be able to help them through targeted schemes.
- ▶ **Correct targeting** might be more important than defining a strict energy poverty definition.
- ▶ Energy poverty is a sensitive issue, therefore special focus should be given on **protection of personal data**.

Thank you for your attention!

Questions for discussion

- Do you have examples of cities or municipalities partnering with utilities to improve the energy efficiency of energy poor households? What could we learn from this experience?
- Do you have examples of financing models for energy poverty programmes?
